Installation Instructions 9-26-19

Model RYK-CH KIT
Ryker Cup Holder Kit

Steps needed to install your Cup Holder Kit!

- 1.- Remove the two 5mm black factory screw on the outside of the left or the inside screws on the right-side control module.

Then take the preassembled cup holder as shown here which is the left-hand installation and place the new 5mm Socket Head bolts w/ washers then spacers. If installing in the right side install the same direction on the right side using the inside bolts as indicated above. This location on the right side allows the cup holder to miss the factory windshield if installed.

Screw both bolts equally and tighten down. Your cup holder is installed.

Bolt location in module.

Completed Cup Holder.

We thank you for purchasing one of our Spyder Extras Products. We know today the needs for accessories that provide a higher level of comfort while riding and we have solved that demand with a stylish Products that complement the design of your Ryker!
